**UMassAmherst** 

## Policy for Diners with Special Dietary Requirements

**Document Number: 1** 

**Effective Date: May 2019** 

Revision Date: May 2025

## 1.0. Purpose and Applicability

- 1.1. The purpose of this standard of practice (SOP) is to understand UMass Dining's policies and procedures when handling safe foods for a diner with a medically restrictive diet.
- 1.2. The intended audience for this SOP is all staff of UMass Dining Services on the University of Massachusetts, Amherst and Mt. Ida campuses.
- 1.3. To prevent any food reactions on campus, staff and students will be trained on an annual basis, emphasizing the importance of food safety and prevention of cross contact.

## 2.0. Background of Food Allergies

- 2.1. Food Allergy Research & Education (FARE) states: "A food allergy is a medical condition in which exposure to a food triggers a harmful immune response. The immune response, called an allergic reaction, occurs because the immune system attacks proteins in the food that are normally harmless. The proteins that trigger the reaction are called allergens. The symptoms of an allergic reaction to food can range from mild (itchy mouth, a few hives) to severe (throat tightening, difficulty breathing). Anaphylaxis is a serious allergic reaction that is sudden in onset and can cause death. Anaphylaxis is a severe and potentially life-threatening allergic reaction affecting more than one body system such as the airways, heart, circulation, gut and skin. Symptoms can start within seconds or minutes of exposure to the food or substance that a person is allergic to and usually will progress rapidly. On rare occasions there may be a delay in the onset of a few hours."
- 2.2. Cross-contact is when an unsafe food (the allergen) mixes with a safe food (food that does not contain the allergen). When this happens the safe food then contains tiny amounts of the unsafe food. The amounts can be so small that you cannot see them. Even if you cannot see the allergen, you can still have an allergic reaction to it.
- 2.3. Specific symptoms are listed below.

#### MILD SYMPTOMS CAN INCLUDE:

- Widespread redness/rash
- Widespread hives
- Itchy mouth or ears
- Vomiting
- Diarrhea
- Mild nausea or discomfort
- Coughing
- Runny nose/sneezing

#### IN SEVERE CASES, SYMPTOMS CAN INCLUDE:

- Swelling of the lips, tongue, face
- Swelling of the throat or mouth
- Wheezing
- Trouble breathing
- Pale or blue color
- Drop in blood pressure
- Fainting
- Dizziness
- Anxiety and/or confusion

If a food reaction occurred from UMass Dining food, a formal investigation will take place at the location where the food was consumed. The investigation will determine how the suspected food was served and prepared and if proper labeling was present at the time of the incident. Policies and procedures will be reviewed or developed to prevent future allergic reactions from occurring.

- 2.4. A food intolerance/sensitivity is a non-immune, digestive system reaction to a particular food substance. A food intolerance/sensitivity is not life threatening. It is caused by a variety of poorly understood mechanisms that interfere with proper full digestion. Response time for symptoms are typically much slower than allergic responses, but can still happen very fast.
- 2.5. Specific symptoms are listed below:
  - Headache
  - Congestion
  - Itching
  - Dermatitis
  - Tiredness
  - Stomach Cramps
  - Reflux
  - Diarrhea
  - Constipation
  - Shortness of breath
- 2.6. Celiacs disease is an auto-immune, digestive disorder. When people with celiac disease eat gluten (a protein found in wheat, rye, barley, and other grains), their body mounts an immune response that attacks the small intestine. These attacks lead to damage on the villi, small fingerlike projections that line the small intestine, that promote nutrient absorption. When the villi get damaged, nutrients cannot be absorbed properly into the body, which can lead to malnutrition.
- 2.7. Specific symptoms are listed below:
  - Dermatitis
  - Diarrhea
  - Abdominal bloating
  - Increased fat in stools
  - Headaches
  - Anemia
  - Weight loss or gain
  - Bone/joint pain
  - Fatique
- 2.8. Diners' Rights: Food allergies and Celiac disease are considered a disability according to the American Disability Association. Therefore, colleges and universities are required to meet the standard of "reasonable accommodations." At UMass, that means:
  - Access to meet with one of UMass Dining's Registered Dietitians to seek further accommodations, especially if a diner has challenges or concerns finding safe foods on a regular basis.
  - To provide "nutritionally comparable" hot and cold allergen-free meals to diners with celiac disease, food allergies, and food intolerances
  - UMass Dining staff takes responsible steps to avoid cross-contact of allergen-free food, including preparing such meals in a dedicated space in its main dining commons
  - Allow diners with multiple severe allergies or dietary restrictions due to medical conditions to pre-order meals made without gluten or specific allergens and serve them in one of our operating dining commons (must work with the Registered Dietitians- refer to the contact sheet on page 6)

## 3.0 Training

- 3.1. UMass Dining staff receive training annually to prevent the cross contact of allergens and keep all diners safe.
  - 1. The UMass Registered and Licensed Dietitians, and their staff train UMass Dining staff annually with AllerTrain Menu Trinfo's curriculum and receive a certificate if they successfully passed the exam.

## 4.0 Diners' Responsibilities

- 4.1. Diners must carry all medications on them at all times while on campus in case of an allergic reaction. UMass Dining staff are unable to store or administer any medications for diners.
- 4.2. Diners need to speak to a manager if they feel uncomfortable navigating dining operations on campus. If the diner cannot find a manager, they can go to the cashier station and ask them to contact the manager on duty.

  4.3. If a food-related reaction occurs while in a UMass Dining facility, the student's health and well-being are top priority. The student can take the prescribed medication. A friend should notify a dining manager or supervisor on duty so they can assist getting medical help and a formal investigation will be conducted (refer to contact information on the last page for email addresses/phone numbers).

## 5.0 Policy if a diner has a food allergy reaction

#### 5.1. Procedure if a diner has a **SEVERE ANAPHYLACTIC REACTION**:

- 1. If a diner is having an anaphylactic reaction in a UMass Dining location, a UMass Dining staff can immediately help the diner locate their medication. UMass Dining staff cannot administer medications per University policy.
- 2. The staff member must call 911 and say "Anaphylaxis" and "Food Allergy Reaction." Emergency personnel have epinephrine in vehicles for emergencies as it is required by law.
- 3. Staff must stay with the diner and will ask someone else to get a manager on duty (MOD) until the EMT/Police arrive.
- 4. Staff will NOT move the diner as moving diner can cause symptoms to worsen, very guickly.
- 5. Staff needs to inform the diner that a full investigation will be conducted to determine the cause of the food allergy reaction.
- 6. MOD must fill out the Food Allergy Reaction Form with contact information and any information available (attached) and forward to the UMass Health Inspector, UMass Dining Dietitians and the Director of the Dining location as soon as possible. If possible, the manager will ask the diner for an emergency contact to notify them of the incident.
- 7. MOD must email the UMass Dining Dietitians, EH&S Health Inspector, and Director of Dining, regarding the incident, and must also submit the Food Allergy Reaction Form.
- 8. If a reaction occurs outside the dining location with food from UMass dining, diner must email the Registered Dietitians at <a href="mailto:dietitian@umass.edu">dietitian@umass.edu</a> within 24 hours after the incident to report it so a full investigation can be conducted.

#### 5.2. Procedure if a diner has a NON-ANAPHYLACTIC REACTION:

- 1. If staff is made aware of the situation, staff can assist diner in locating their medication. Staff must stay with the diner during this period.
- 2. Staff must call the manager on duty immediately.
- 3. MOD must ask for diners' name, UMass ID and phone number and fill out the Food Allergy Reaction Form.
- 4. If the diner needs to go to University Health Services, someone should go with them in case symptoms worsen. Medical assistance may be required immediately.
- 5. MOD must email the UMass Dining Dietitians, EH&S Health Inspector, and Director of Dining, regarding the incident, and must also submit the Food Allergy Reaction Form.
- 6. If a reaction from UMass Dining food occurs outside the dining commons or any retail establishments with food from UMass Dining, the diner must contact the Registered Dietitians at <a href="mailto:dietitian@umass.edu">dietitian@umass.edu</a> within 24 hours after the incident to report it so a full investigation can be conducted.

## 6.0 Investigation of Food Allergy Reaction

EH&S and UMass Dining Dietitians may assist with the investigation to determine the cause of the food allergy reaction. Policies and procedures are adjusted to ensure the same sort of reaction does not occur in the future. The EH&S and/or UMass Dining Dietitians will contact the diner once it is reported to assist in the investigation. Results will be shared with the diner once the cause has been discovered.

- **7.0 Hospital Information:** If a diner needs further medical care other than the University Health Services, the diner will be transported to:
  - Cooley Dickinson Hospital, 30 Locust Street, Northampton, MA 01060
    - o Phone: 413.582.2108
    - o The Amherst EMTs do have epinephrine in the vehicles

#### Reason of Reaction

- Standardized recipe not followed
- Signage not followed
- o No signage
- Signage incorrectly displayed
- Cross contact in kitchen
- o Cross contact on line
- Cross contamination on equipment
- o Menu change

#### **Comments from Investigators:**

Name	Date, Comments, Corrective Action	

Form should be filled out immediately following an allergic reaction

Collect as much information regarding the incident—Dining Administration will continue the investigation, you do not need to fill in the entire form. The most important information is Contact Information and Incident Information.

#### BDP:

- Managers/ Asst. manager, supervisors, head cooks and chefs should always have a note pad and pen on their person.
- Question to ask at the time of incident:
  - O What is your name?
  - What is UMass ID?
  - o What is your cell phone number?
  - o What did you eat?
  - o What are you allergic to?
  - o Do you have medication on you?
  - o Do you need help finding medication?
  - o Is there someone we should call?
- Call 911/5-2121 (UMass Police) if need takes epinephrine.
- Stay with customer until help arrives (police/ambulance)
- Fill form out and e-mail to Director, Dietitian and health Inspector.
- Text Director and Dietitian after customer in hands of medical staff

**Follow up protocol:** After the incident, the UMass Dining Dietitian will contact the customer regarding her/ his well-being. She will make at least three connections following the allergic reaction; if a student opts out of the connections, it will be noted.
